Oracle Content Management Strategy

Oracle ECM for Apps

Increase the agility of business processes

- Reduce document storage and shipping costs by eliminating paper from high transaction processes
- Streamline operations with advanced in-context information management for line-of-business users
- Free up user resources from manual search and retrieval and audits to spend on more valuable tasks
- Ease collaboration and communication within and beyond the enterprise using library services, web publishing and workflow
- Increase process visibility with real-time dashboard views

Oracle ECM for Apps

One platform content-enables all applications

- **Enterprise-wide:**
 - One content repository supports all applications
- **Open and Integrated:**
 - Standards-based, productized integrations
- **Complete:**
 - End-to-end, single vendor process automation
- **Strategic:**
 - Built in line with Oracle Applications product strategy

ECM for Apps Integrations

Use cases

- **Ad-hoc attachments:**
 - Replace native application attachment document stores
 - View and attach documents associated with application entities
 - Provide enterprise class scalability and functionality
 - Leverage application content throughout the enterprise
 - Examples: call centers, employee records (reviews, benefits)
- **High volume document processing:**
 - Automate paper-based processes
 - Provide imaging, capture, workflow and document task processing
 - High document routing and mark-up requirements
 - Examples: Accounts payable, time & expense management, order management, employee onboarding, etc...

ECM for Apps Approach

Application Extension Framework & Adapters

- Objective:
 - Provide a generic integration with business applications enabling customers to content-enable any application module
- Solution:
 - Application Extension Framework (AXF)
 - Lightweight infrastructure designed to enable access to content and content-centric workflow tasks to easily extend the functionality of business applications
 - Application Adapter for AXF
 - Generic meta-data driven plug-in for each application that passes user context and associated metadata to AXF

AXF/Application Adapter Design

Seamless UI Experience

- Bring content to the business application
- Reduce training and process change impact on users

Loosely Coupled Back-end

- Minimize application footprint
- Provide configurable integrations to reduce customizations

Productized, not Customized

- Productized, supported integration with Oracle Applications
- Componentized solution built on standards

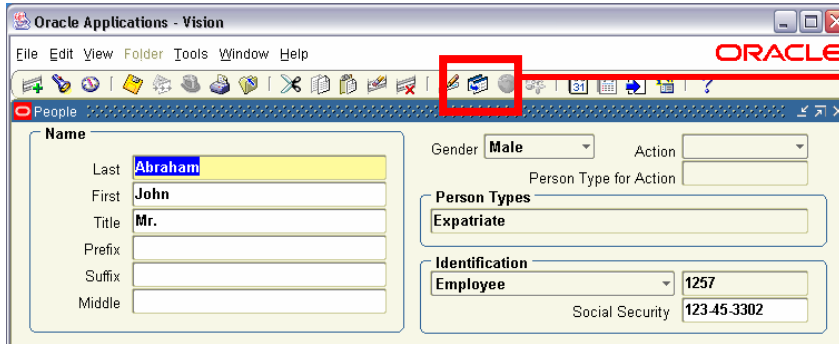

E-Business Suite Adapter for Oracle ECM

Attachments Solution

- Ad-hoc attachments:
 - Replace native application attachment document stores
 - View and attach documents associated with application entities
 - Provide enterprise class scalability and functionality
 - Leverage application content throughout the enterprise
- Supports any forms-based E-Business Suite application, but...
- Imaging solution is better suited for Financials and some HR processes
- Key focus markets for attachments:
 - Procurement Contracts
 - Order Management
 - Asset Management
 - Employee Records
 - Case Management
 - Account Opening
- Certified with E-Business Suite 11.x, 12.0.4+, 12.1.1+

EBS Adapter for ECM - Attachments

Easy access to attachments stored in UCM

- Managed Attachments UI is launched from EBS to:
 - View/Edit Attachments
 - Check-in, Scan, etc.

Managed Attachments

EBS Adapter for ECM - Attachments

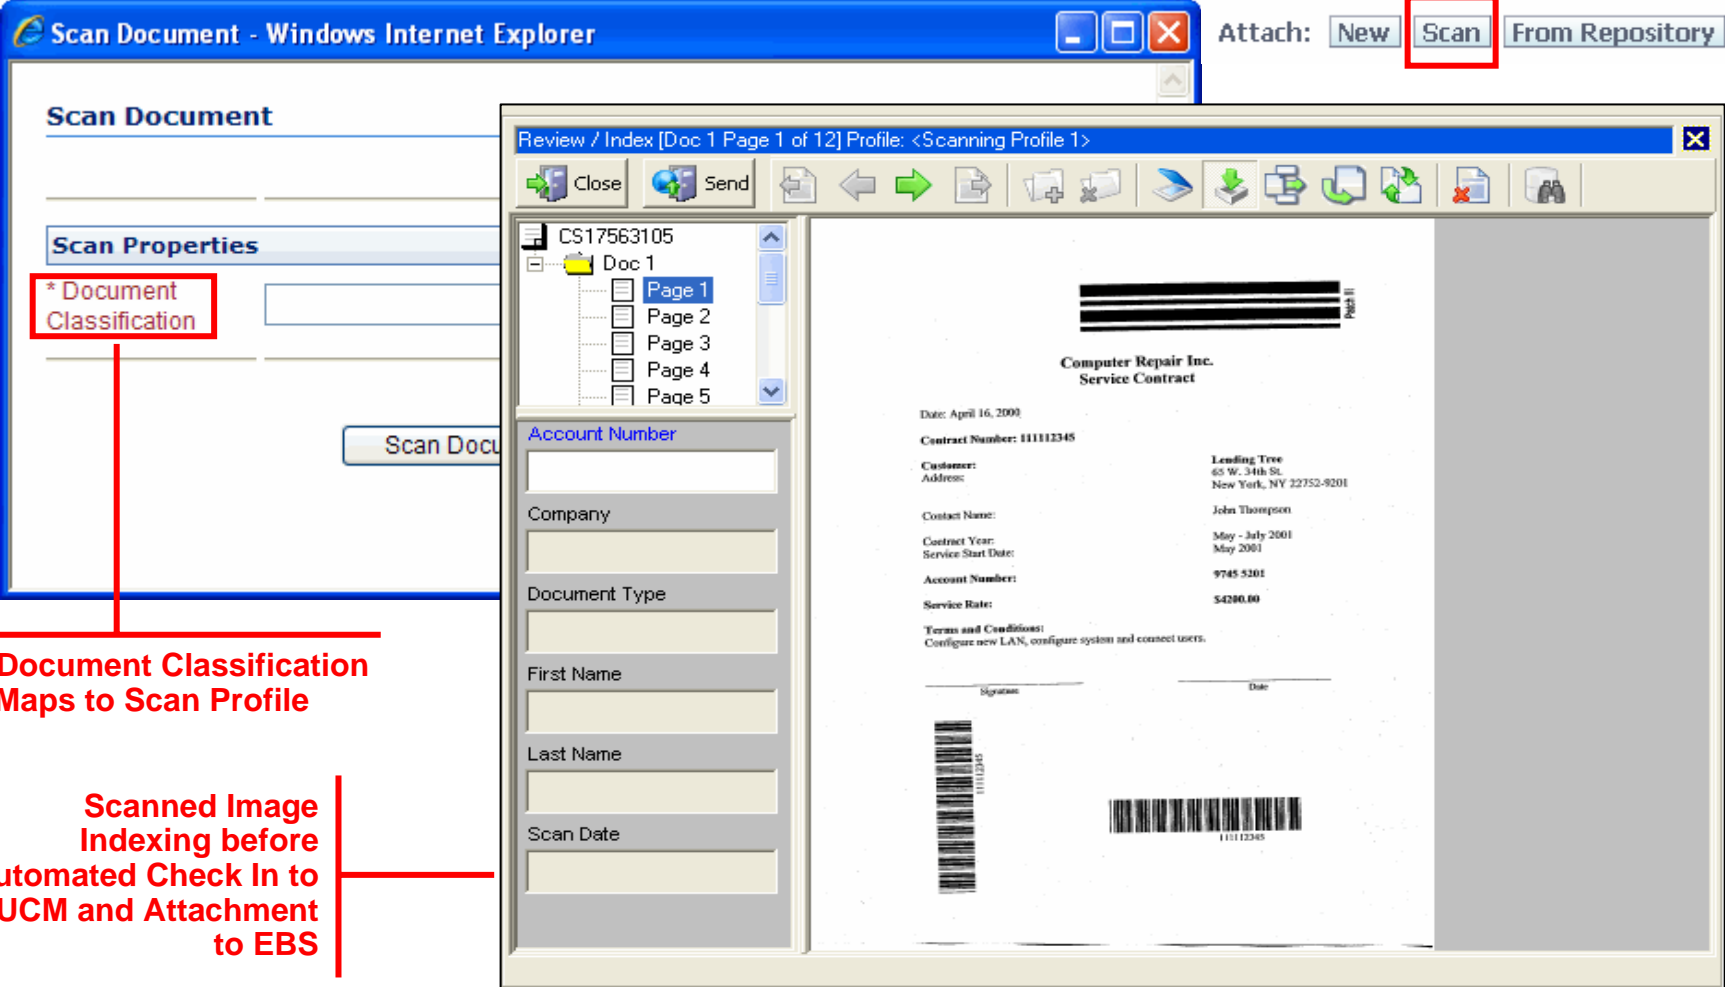

Document Management functionality for EBS users

- Check-in and attach content
- Auto-convert to PDF, HTML, TIFF
- View attachments and metadata
- Edit documents using native apps
- Automatic versioning upon save
- Update metadata
- Attach existing UCM content
- Detach content
- Delete attachment revisions
- Invoke content-centric workflows
- Publish content to web sites, portals
- Access content via desktop integration

EBS Adapter for ECM

Scanning with Oracle Distributed Document Capture

The screenshot displays two overlapping web browser windows. The background window is titled "Scan Document - Windows Internet Explorer" and shows a "Scan Document" page with a "Scan Properties" section. A red box highlights the "* Document Classification" field, with a red line pointing to a text box below it containing the text "Document Classification Maps to Scan Profile". The foreground window is titled "Review / Index [Doc 1 Page 1 of 12] Profile: <Scanning Profile 1>". It features a toolbar with "Close" and "Send" buttons, a file tree on the left showing "Doc 1" with pages 1 through 5, and a main content area displaying a scanned document. The document is a "Service Contract" for "Computer Repair Inc." dated April 16, 2000. The contract details include Contract Number 11112345, Customer Address (45 W. 34th St., New York, NY 22752-9201), Contact Name (John Thompson), Contract Year (May - July 2001), Service Start Date (May 2001), Account Number (9745 5301), and Service Rate (\$4280.00). The document also includes a "Terms and Conditions" section and a barcode at the bottom with the number 11112345. A red box highlights the "Scan" button in the "Attach:" section of the background window, with a red line pointing to a text box below it containing the text "Scanned Image Indexing before Automated Check In to UCM and Attachment to EBS".
