

Trend and Risks

IBM Internet Security Systems (ISS)

Vlatko Košturjak, IBM ISS - EMEA

Agenda

- Few facts
- IBM ISS X-Force
- IBM ISS X-Force Trend & Risks Report / Threat report
 - Vulnerability Disclosures
 - Economics of Attacker Exploitation
 - Top ten vendor list for disclosures
 - Patches unavailable
 - Browser exploitation
 - Spam
 - Phishing
 - Malware
- Questions and Answers

Facts

- You're defending yourself from world wide criminals
- Law doesn't work across borders, attackers do
- No difference in attacking someone locally or 1000 miles away
- All tools are available
- ...

Knowledge & Attacker

IBM Global Security Reach

IBM ISS has the unmatched global and local expertise to deliver complete solutions – and manage the cost and complexity of security

X-Force R&D -- Unmatched Security Leadership

The mission of the
IBM Internet Security Systems™
X-Force® research and development
team is to:

- Research and evaluate threat and protection issues
- Deliver security protection for today's security problems
- Develop new technology for tomorrow's security challenges
- Educate the media and user communities

X-Force Research

| | |
|------|------------------------------------|
| 10B | analyzed Web pages & images |
| 150M | intrusion attempts daily |
| 40M | spam & phishing attacks |
| 43K | documented vulnerabilities |
| | Millions of unique malware samples |

Provides Specific Analysis of:

- Vulnerabilities & exploits
- Malicious/Unwanted websites
- Spam and phishing
- Malware
- Other emerging trends

IBM X-Force Threat Reports

The IBM X-Force Trend and Risk Report

The IBM X-Force Trend and Risk Report is produced twice per year: once at mid-year and once at year-end. This report provides statistical information about all aspects of threats that affect Internet security, including software vulnerabilities and public exploitation, malware, spam, phishing, web-based threats, and general cyber criminal activity. They are intended to help customers, fellow researchers, and the public at large understand the changing nature of the threat landscape and what might be done to mitigate it. Questions or comments regarding this report should be addressed to xforce@iss.net.

Latest Trend and Risk Report

In addition to standard vulnerability, malware, spam, phishing, and web threat statistics, the IBM X-Force 2009 Mid-year Trend and Risk Report features the following special topics:

- **Document vulnerabilities.** In the first half of the year alone, the total number of vulnerabilities disclosed in some of the document types we traditionally consider "secure" has already exceeded the total number of disclosed vulnerabilities found in them in all of 2008.
- **Most disclosed vulnerabilities.** Microsoft is no longer

Report archive

- [2008 Annual Trend and Risk Report Report \(4.58MB\)](#)
- [2008 Annual Trend and Risk Report graphics \(ZIP, 3.44MB\)](#)
- [Q1 2009 Threat Insight Quarterly \(690KB\)](#)

Looks Can Be Deceiving: Vulnerability Disclosures Decline but Exploitation Increases

- Declines in some of the largest categories of vulnerabilities
- Slowing disclosure rate is due to the disappearance of the low-hanging fruit from currently researched categories and existing applications
- Exploits targeting these vulnerabilities are increasing, especially SQL injection and ActiveX controls.

Vulnerability Disclosures
in the First Half of Each Year

- High vulnerabilities are down **6%** YOY
- Medium vulnerabilities are up to **62%** of the vulnerabilities (8% YOY increase)

YOY = year over year

source: IBM X-Force®

The Economics of Attacker Exploitation

- Economics continue to play heavily into the exploitation probability of a vulnerability
- Recent Document Reader vulnerabilities impacting office documents and PDFs are very profitable and easily executable

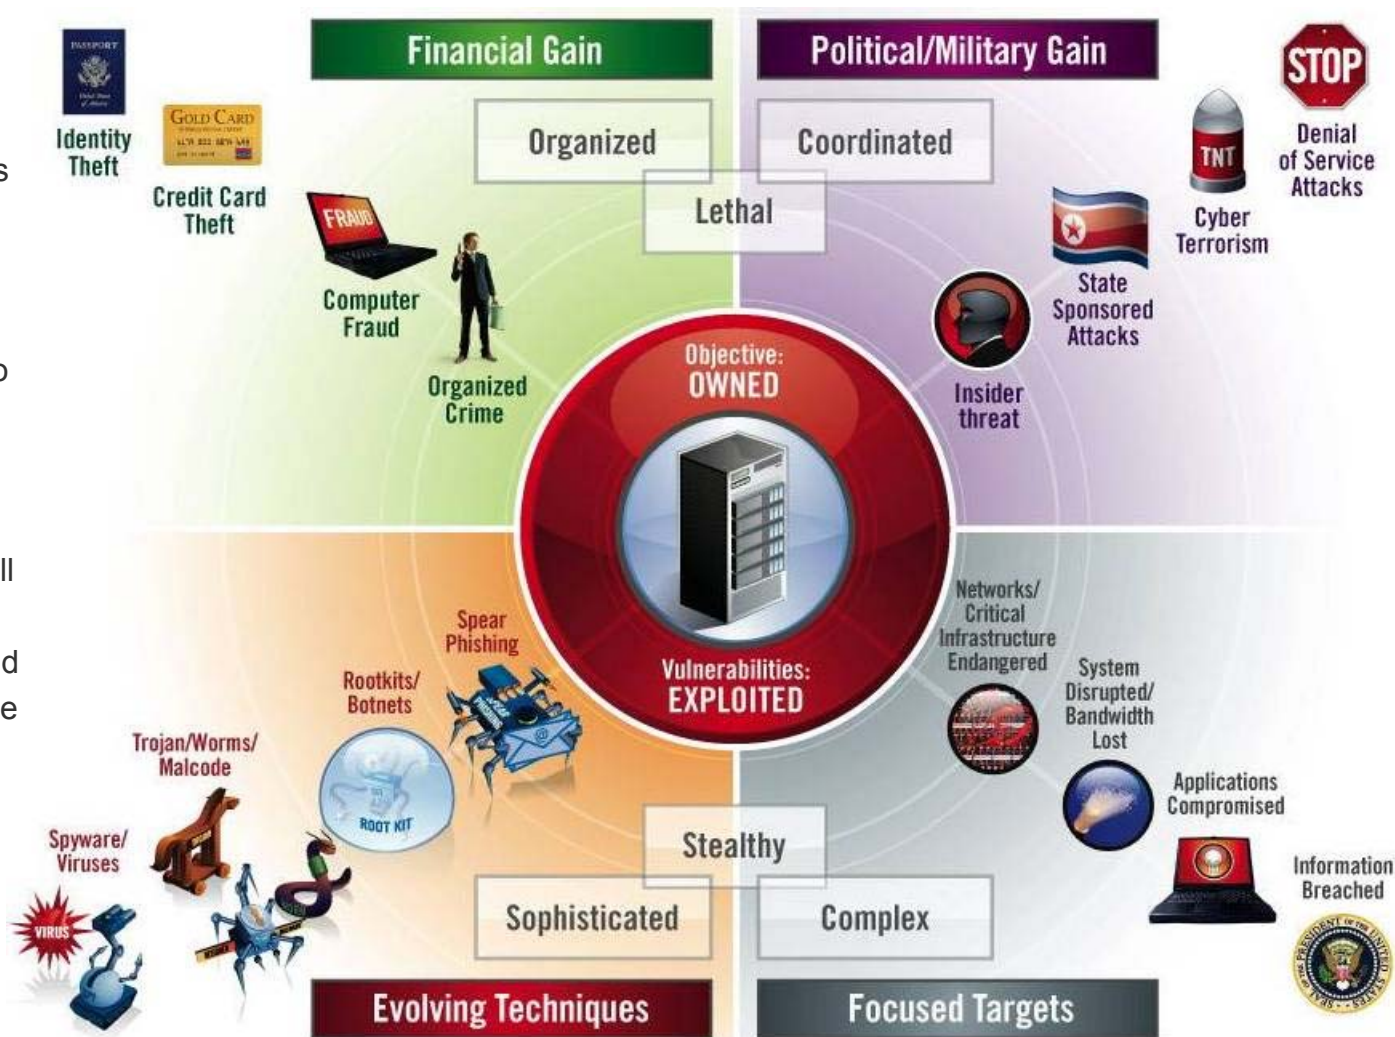

source: IBM X-Force®

The Economics of Attacker Exploitation

Threat Evolution:

- A flat world has brought about an unprecedented amount of criminals and cons
- Attackers keep ROI in mind as well, and constantly evolve their wares in order to re-purpose it for the next flood of attacks
- High profile vulnerabilities will still be the vehicles for new attacks, however, the low and slow attack vectors cannot be ignored
- The economics of exploitation must be taken into consideration to better prioritize risk

Microsoft, Apple and Sun Top Vendor List for Disclosures

- Top ten vendors account for **24%** of all disclosed vulnerabilities, up from 19% in 2008

| 2009 H1 | | | 2008 (Full Year) | | |
|---------|----------|-------------|------------------|-----------|-------------|
| Ranking | Vendor | Disclosures | Ranking | Vendor | Disclosures |
| 1. | Apple | 3.8% | 1. | Microsoft | 3.16% |
| 2. | Sun | 3.6% | 2. | Apple | 3.04% |
| 3. | Micrsoft | 3.1% | 3. | Sun | 2.19% |
| 4. | Oracle | 2.7% | 4. | Joomla! | 2.07% |
| 5. | IBM | 2.5% | 5. | IBM | 2.00% |
| 6. | Drupal | 2.0% | 6. | Oracle | 1.65% |
| 7. | Mozilla | 1.8% | 7. | Mozilla | 1.43% |
| 8. | Cisco | 1.8% | 8. | Drupal | 1.42% |
| 9. | Linux | 1.5% | 9. | Cisco | 1.23% |
| 10. | Joomla! | 1.2% | 10. | TYPO3 | 1.23% |

Table 2: Vendors with the Most Vulnerability Disclosures

- Microsoft dropped to #3 after holding the top spot since 2006
- Apple moved up to the #1 spot

My vendor not on this list? :)

Are those vendors taking security seriously? :(

Application & Processes:

Patches Still Unavailable for Half of Vulnerabilities

| Vendor | Disclosures | Unpatched | % Unpatched |
|-----------|-------------|-----------|-------------|
| Joomla! | 40 | 32 | 80% |
| Apple | 122 | 22 | 18% |
| Microsoft | 100 | 17 | 17% |
| Drupal | 65 | 9 | 14% |
| Mozilla | 59 | 8 | 14% |
| TYPO3 | 24 | 3 | 13% |
| Cisco | 57 | 5 | 9% |
| Novell | 40 | 2 | 8% |
| HP | 40 | 3 | 8% |
| Sun | 117 | 5 | 4% |

*Vendors with twenty or more disclosures in 1H 2009

**IBM Disclosures 82, Unpatched 3, % Unpatched 3.7%

- Nearly half (**49%**) of all vulnerabilities disclosed in the first half of 2009 had no vendor-supplied patches to remedy the vulnerability

- Top 10 categories of operating systems account for **89%** of all operating system vulnerability disclosures and **93%** of all critical and high operating system disclosures in the first half of 2009.

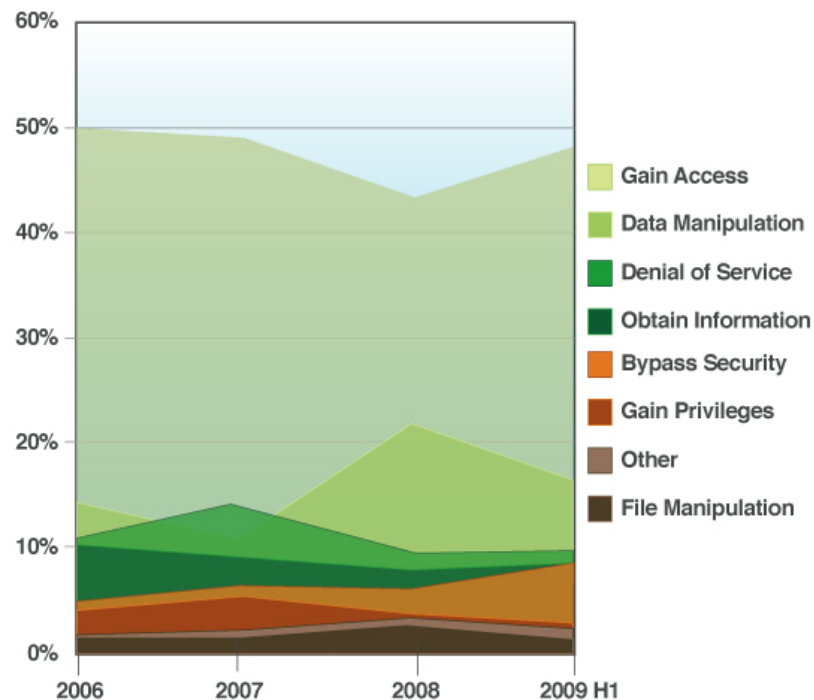

| Operating System | Percentage of Critical and High | Percentage of All OS Vulnerabilities |
|------------------|---------------------------------|--------------------------------------|
| Microsoft | 39% | 14% |
| Apple | 18% | 24% |
| Sun Solaris | 14% | 26% |
| Linux | 14% | 20% |
| IBM AIX | 7% | 3% |
| BSD | 2% | 4% |
| Others | 7% | 11% |

2009 Attacker Motivation is to Gain Access and Manipulate Data

- “Gain access” remains the primary consequence of vulnerability exploitation
 - Approaching the **50%** mark that was previously seen throughout 2006 and 2007
- “Data Manipulation” took a plunge but still higher in comparison to 2006 and 2007
- “Bypass Security is increasing

Vulnerability Consequences

source: IBM X-Force®

Application & Processes:

Web App Vulnerabilities Continue to Dominate

- **50.4%** of all vulnerabilities are Web application vulnerabilities
- SQL injection and Cross-Site Scripting are neck and neck in a race for the top spot

Web Application Vulnerabilities
as a Percentage of All Disclosures in 2009 H1

source: IBM X-Force®

Vulnerability Disclosures Affecting Web Applications
Cumulative, year over year

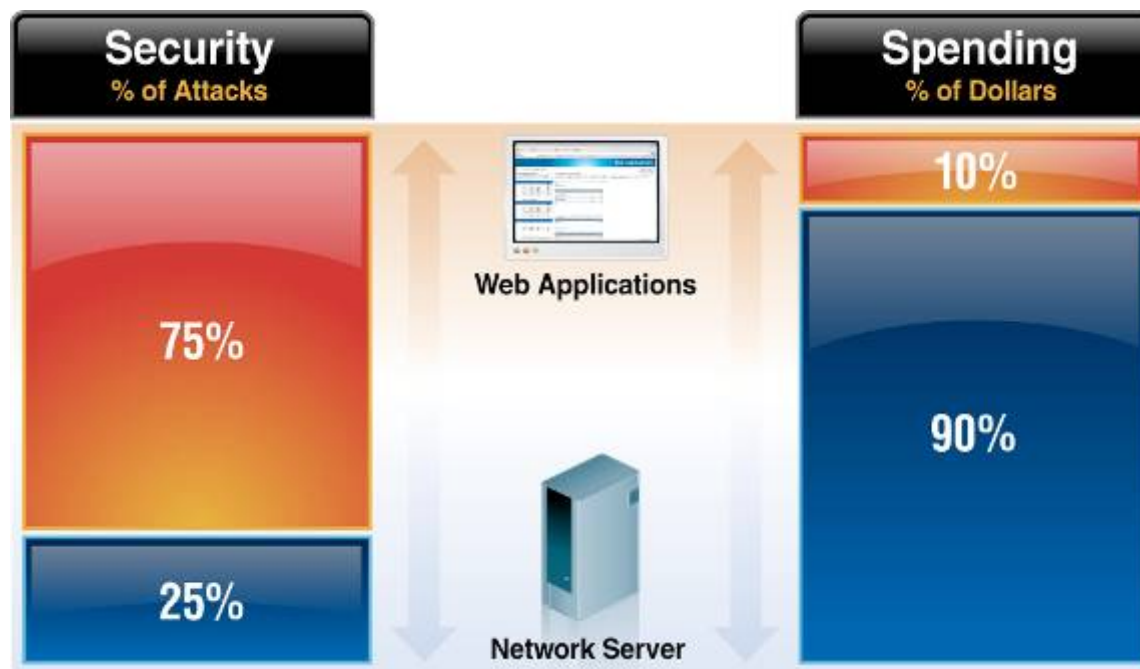

source: IBM X-Force®

Application & Processes:

Web App Vulnerabilities Continue to Dominate

Security and Spending are Unbalanced

"The cleanup cost for fixing a bug in a homegrown Web application ranges anywhere from \$400 to \$4,000 to repair, depending on the vulnerability and the way it's fixed."

-Darkreading.com

Application & Processes:

Cross Site Scripting and Injection Attacks Continue to Dominate

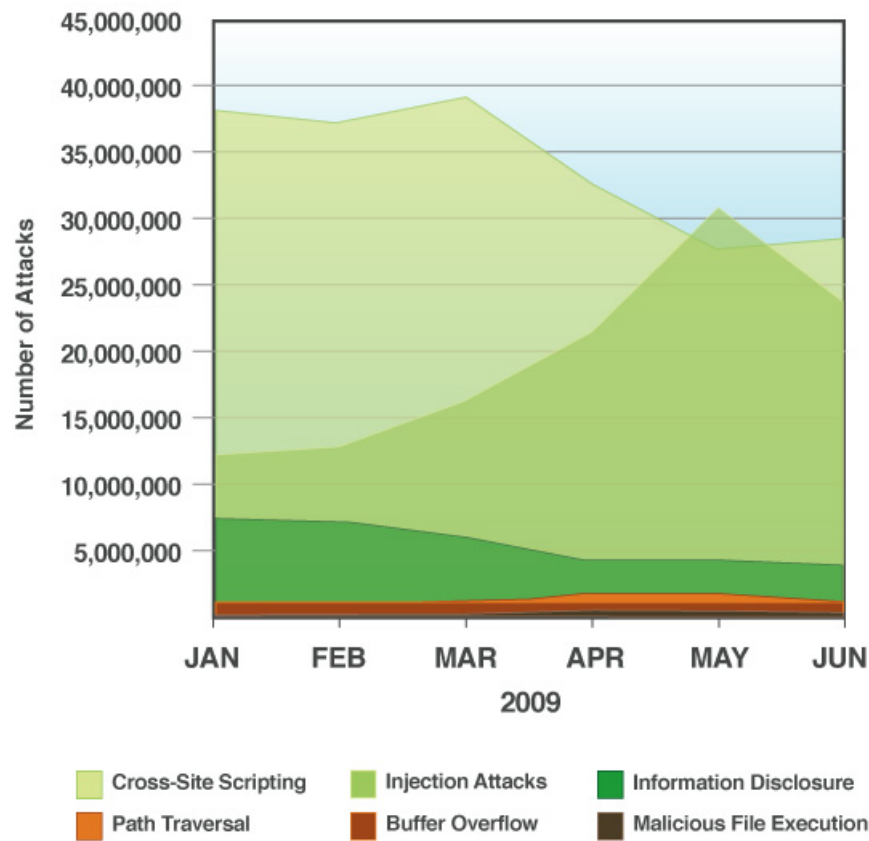

- **90%** of injection attacks are attributed to SQL-related attacks
- Automated toolkits continue to flourish in 2009
- SQL injection attacks continue to grow up **50%** in Q1 2009 vs. Q4 2008 and nearly doubling in Q2 vs. Q1

SQL Injection Attacks
Average Daily Attacks by Month

source: IBM X-Force®

Web Application Attacks
by Category

source: IBM X-Force®

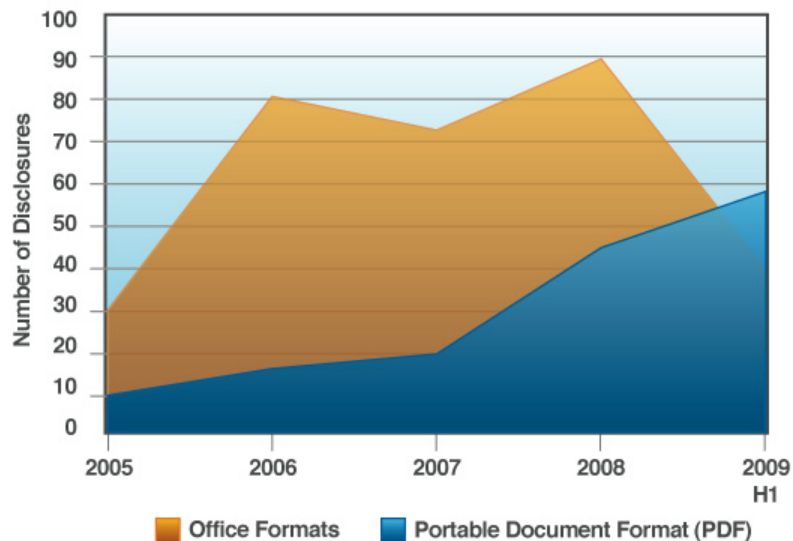

Data & Information:

Vulnerabilities in Document Readers Skyrocket

- Portable Document Format (PDF) vulnerabilities disclosed in the first half of 2009 has already surpassed disclosures from all of 2008.
- PDF disclosures traded places with Office document disclosures to take the top spot.

Document Format Vulnerabilities

Points to Consider:

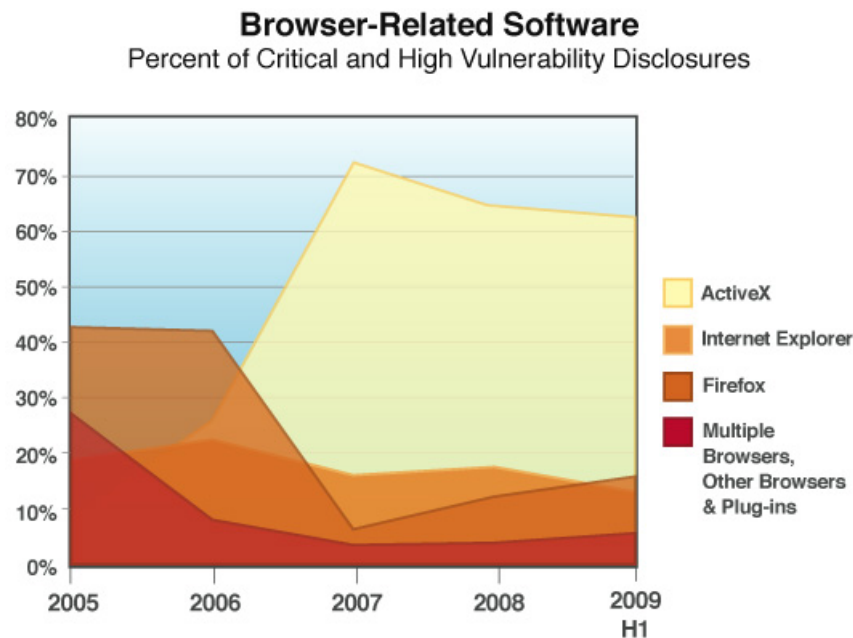

- Users trust .PDF more than .EXE
- PDF exploits becoming a popular method of attack

source: IBM X-Force®

Browser Exploitation Prevention

- **The Web browser is the universal application**
- Attackers know that it delivers the best ROI
- **BEP protects against web browser exploitation regardless of the vulnerability**
- Approximately 20 signatures protecting against hundreds of vulnerabilities in multiple browsers
- Protects against both shellcode and obfuscated exploits
- Most IPS technology can't do either

source: IBM X-Force®

Data & Information:

Decline in Disclosures Does Not Impact Exploitation

- Decline in ActiveX disclosures does not appear to be making an impact on exploitation.
- Three of the five most popular exploits are ActiveX controls.

First time that a PDF exploit is in the top 5 list.

| Most Popular Exploits | | |
|-----------------------|--|--|
| Rank | 2008 H2 | 2009 H1 |
| 1. | Microsoft MDAC RDS Dataspace ActiveX (CVE-2006-0003) | Microsoft MDAC RDS Dataspace ActiveX (CVE-2006-0003) |
| 2. | Microsoft WebViewFolderIcon ActiveX (CVE-2006-3730) | Microsoft Snapshot Viewer ActiveX (CVE-2008-2463) |
| 3. | Internet Explorer "createControlRange" DHTML (CVE-2005-0055) | Adobe Acrobat and Reader Collab.CollectEmailInfo (CVE-2007-5659) |
| 4. | RealPlayer IERPCtl ActiveX (CVE-2007-5601) | Microsoft IE7 DHTML Object Reuse (CVE-2009-0075) |
| 5. | Apple QuickTime RSTP URL (CVE-2007-0015) | RealPlayer IERPCtl ActiveX (CVE-2007-5601) |

People & Identity:

Spam Continues to Change to Avoid Detection

- Spam is up approximately **40%** in 2009
- 60%** of spam classified as URL spam
- Using “trusted” domains and “legitimate links” continues to help avoid anti-spam technologies
- Brazil, the U.S., and India account for about **30'** of worldwide spam
- Image-based Spam has returned

People & Identity:

Phishing Attacks Decline Dramatically

- Phishing attacks decline to only 0.1% of the spam volume, driven down by a sharp decline in financial phishing (66% of all phishing vs. 90% in 2008)
- Attacks against online payment institutions remain steady

| Subject Line | % |
|---|--------|
| Attention! Votre compte PayPal a ete limite! | 24.05% |

People & Identity:

Malicious Web Links Increase by 508%

- United States and China continue to reign as the top hosting countries for malicious links
 - Japan makes the top three at 8%
- Many more second tier countries are jumping into this game
 - Countries hosting at least one malicious URL jumped by **80%** in comparison to 2008

Malicious URLs by Second-Tier Hosting Countries

source: IBM X-Force®

Malicious URLs by Top-Tier Hosting Countries

Source: ISS Cobion Crawler, 2006-2009 H1

source: IBM X-Force®

People & Identity:

Majority of New Malware Are Trojans

- Trojans increased by nine percentage points, up from 46% in 2008
- Large number of new malware is generated by publicly-available toolkits
- Level of sophistication seen in 2009 malware was unprecedented
 - Techniques to propagate, mutate and hide indicate attackers have the finances and the expertise to outsmart those that can't keep up

source: IBM X-Force®

Bronze Edition

- This product is the improved version of Turkojan 3.0 and it has some limitations(Webcam - audio streaming and msn sniffer doesn't work for this version)
- 1 month replacement warranty if it gets dedected by any antivirus
- 7/24 online support via e-mail
- Supports only Windows 95/98/ME/NT/2000/XP
- Realtime Screen viewing(controlling is disabled)

Price : 99\$ (United State Dollar)

Silver Edition

- 4 months (maximum 3 times) replacement warranty if it gets dedected by any antivirus
- 7/24 online support via e-mail and instant messengers
- Supports 95/98/ME/NT/2000/XP/Vista
- Webcam streaming is available with this version
- Realtime Screen viewing(controlling is disabled)
- Notifies chngements on clipboard and save them

Price : 179\$ (United State Dollar)

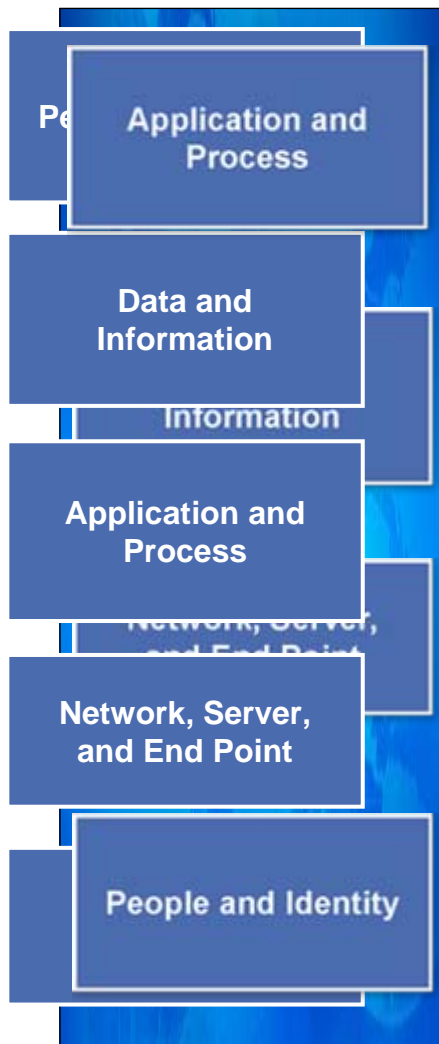

Gold Edition

- 6 months (unlimited) or 9 months(maximum 3 times) replacement warranty if it gets dedected by any antivirus (you can choose 6 months or 9 months)
- 7/24 online support via e-mail and instant messengers
- Supports Windows 95/98/ME/NT/2000/2003/XP/Vista
- Remote Shell (Managing with Ms-Dos Commands)
- Webcam - audio streaming and msn sniffer
- Controlling remote computer via keyboard and mouse
- Notifies chngements on clipboard and save them
- Technical support after installing software
- Viewing pictures without any download(Thumbnail Viewer)

Price : 249\$ (United State Dollar)

Report Summary:

Attacks Continue Across all Security Domains

- **3,240** new vulnerabilities were discovered in the first half of 2009, representing a decrease in comparison to 2008
 - Largest categories of new vuln disclosures, SQL injection and ActiveX exploits, are slowing although exploitation remains strong
 - **50.4%** of all vulnerabilities are Web application vulnerabilities
-
- Attackers have turned to hiding exploits in malicious documents that are hosted on Web sites or sent to victims through email (like spam)
 - Portable Document Format (PDF) vulnerabilities disclosed in the first half of 2009 have already surpassed disclosures from all of 2008
-
- New malicious Web links increased by **508%** in comparison to the first half of 2008
 - Attackers are exploiting trusted Web sites to fool users into clicking their malicious links
 - Trojans make up **55%** of all Malware. Information-stealing Trojans are largest category
-
- Although URL spam (email with links to the spam content) are still the predominant type of spam, image-based spam has started to make a comeback.
 - **66%** of phishing is targeted at the finance industry, **31%** targeted at online payment institutions

Few things to consider...

- Microsoft Windows AutoRun
- Secure Socket Layer (SSL)
 - SSLsniff
 - SSLstrip
 - MD5 collision – CA keys compromise
 - Zero-byte certificate attack
 - ...
- Social engineering attacks
 - Last time your employees had education?
