ORACLE®

The future of Business Intelligence & Enterprise Performance Management

Alexander Meixner
Sales Executive, BI/EPM, South East Europe

Oracle's Product Strategy and Vision for an Enterprise Performance Management System

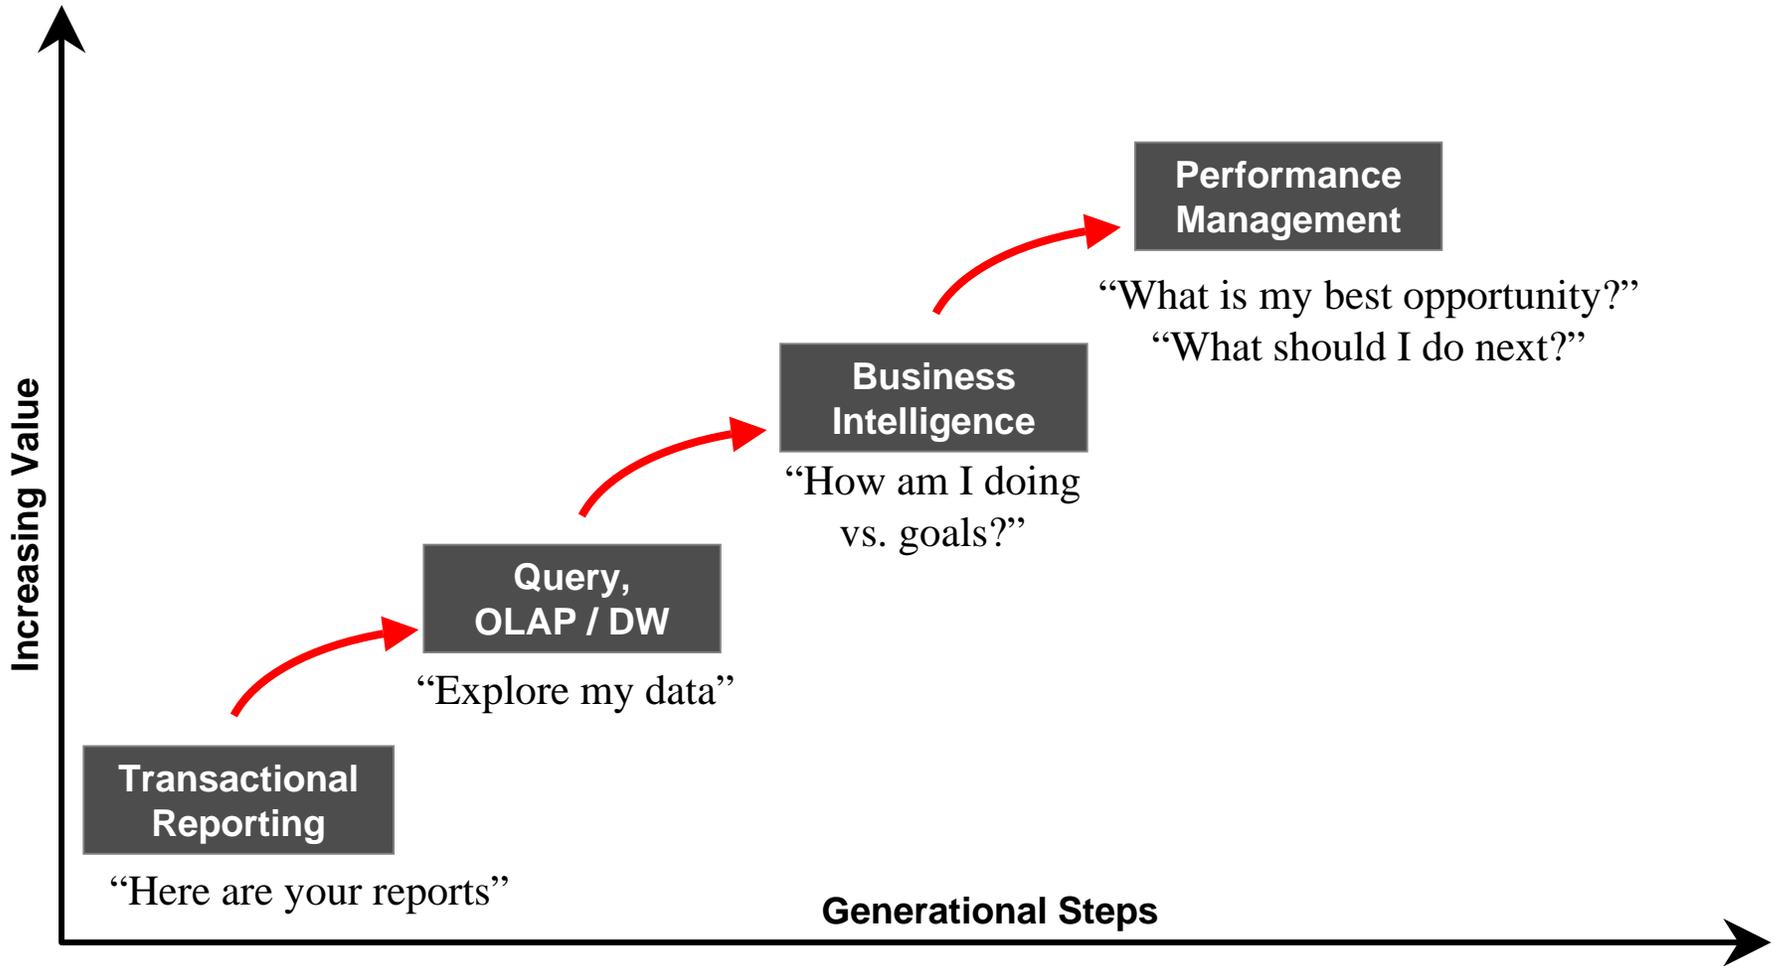

What Gartner is Saying

“The majority of customers are purchasing and implementing BI and CPM as disparate point solutions, which weaken their ability to achieve pervasive BI or to link BI platform and CPM suites capabilities into an integrated continuum to drive business transformation from the strategic level to the process level”

Source: Employ a Coordinated Approach to BI and CPM, April 2007

Gaining Market Share

Business Intelligence Tools

Why Did Oracle Acquire Hyperion?

Strategic Rationale

- **New Management System for Business**
 - Integrates Enterprise Resource Planning, Operational Business Intelligence, Financial Performance Management Systems
- **Enterprise Resource Planning Systems**
 - Automate Core Functions and Processes of Business
- **Operational Business Intelligence Systems**
 - Capture Operational Information to Enable Decision Making
- **Financial Performance Management Systems**
 - Defines Strategy, Plans, Metrics to Guide Organization

named one of 10
most influential
innovations of
past 10 years by
InformationAge

The 10 most influential innovations

InformationAge
Business insight for technology decision-makers

■ Netscape

The browser that started it all. Launched in 1994, Netscape became a household name as it kicked off the dot com boom with its initial public offering in August 1995.

■ Essbase

The multi-dimensional database technology that put online analytical processing (OLAP) on the business intelligence map. Developed by Arbor Software (now part of Hyperion Solutions), it spurred the creation of scores of rival OLAP products – and billions of OLAP cubes.

■ BlackBerry

Launched in 1998, the email handheld device executives love to hate became the iPod of the connected generation when it started delivering over GPRS in 2002.

■ Google

Formed in 1995, Google was an also-ran in Internet search even as late as 2000 when it trailed Yahoo and Altavista. But rivals did not quite have the same vision for the pivotal role of search in accessing the ever-expanding Internet as founders Larry Page and Sergey Brin.

■ Virtualisation

While possible on the mainframe since the 1980s, breaking the link between physical and logical resources at the storage, server and even chip level has brought clear benefits in terms of efficiency, resilience and manageability – and made silo a dirty word.

■ VoIP

By breaking up voice calls into packets and sending them over an Internet protocol rather than the plain old circuit-switched phone system, VoIP is as disruptive for the telcos as it is for enterprise communication.

■ Linux

When Linus Torvalds first posted on a Usenet newsgroup in 1991 about his hobby to make a free operating system, he said it would not be “big and professional”. That is just what his open source program has become.

■ XML and web services

The Extensible Mark-up Language enables the creation of open, easily shared file formats, paving the way for truly interoperable, interconnected software and the service-oriented architecture.

■ Pentium processor

In the late '80s and early '90s, application hunger for processing power ran ahead of the capabilities of Intel x86 PC chips. With its arrival in 1993, and upgrades throughout the decade, Pentium reversed that equation, enabling it to storm the engineering and multimedia workstation markets and create a consumer brand that ranks alongside Nike.

■ ADSL

Remember 30-second web page downloads and the ‘world wide wait’? The ability to send data down phone lines ten times faster than a standard 56k dial-up modem was the key enabler of consumer ecommerce.

Process

Oracle BI Applications - Analytical Processes in a BOX”

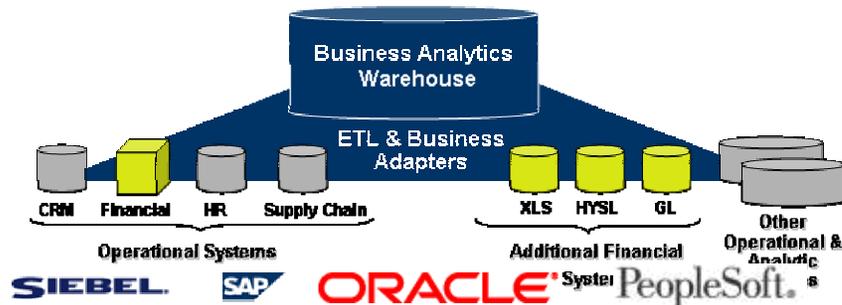

- Add insight to CRM and ERP applications
- Pre-built BI content, but also easy to adapt and extend
- Works with existing IT environment
- Fast time to value
- Lower TCO
- Over 1000 customers

Example:

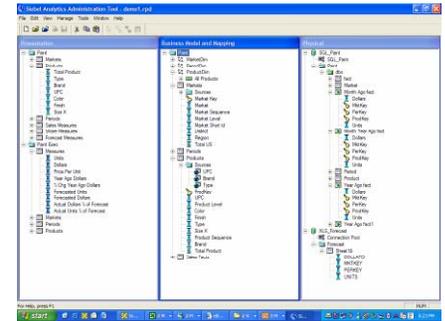

Oracle Financial Analytics Product Components

- 1 Pre-built ETL to extract data from hundreds of operational tables and load it into the DW, sourced from Oracle EBS, PeopleSoft Enterprise, Siebel CRM, SAP R/3, and others.

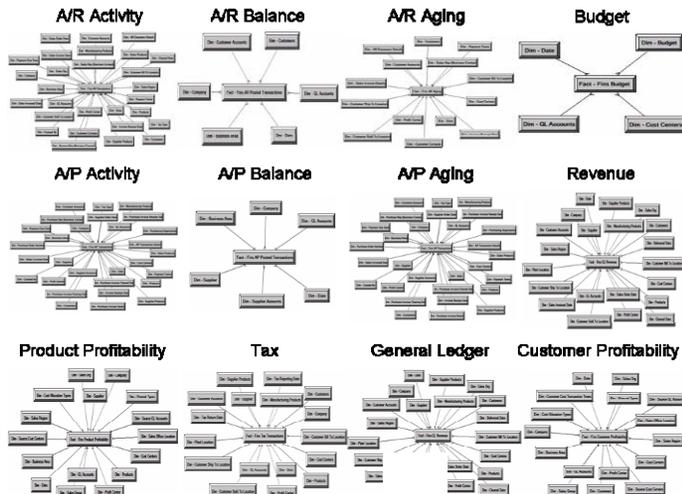

- 3 Pre-mapped metadata, including embedded best practice calculations and metrics for Financial, Executives and other Business Users.

- Presentation Layer
- Logical Business Model
- Physical Sources

- 2 Pre-built warehouse with more than 16 star-schemas designed for analysis and reporting on Financial Analytics

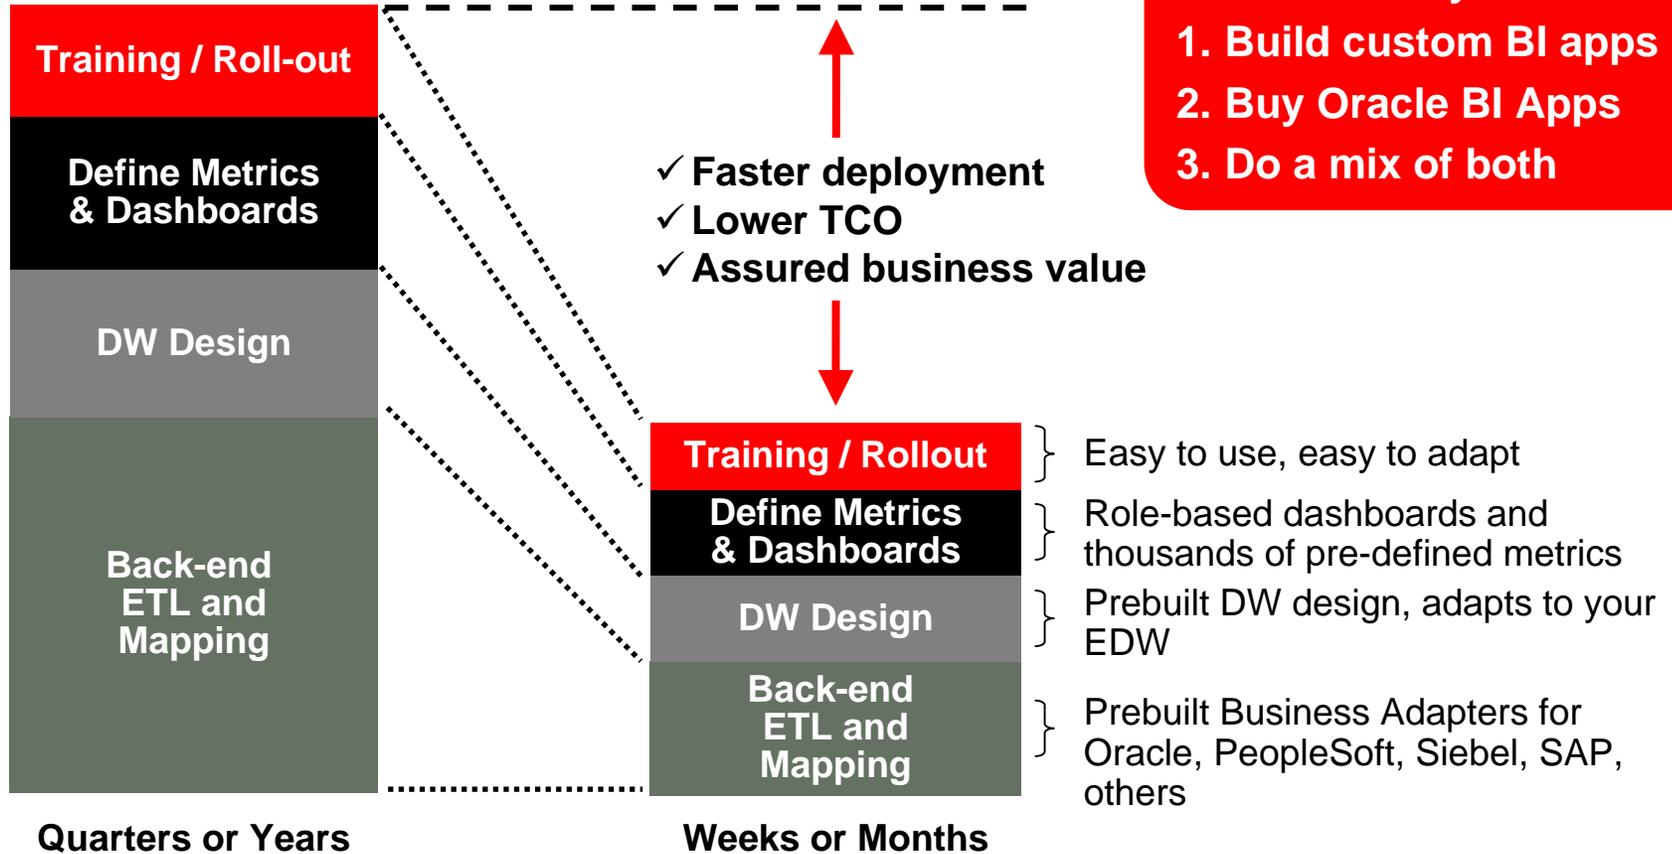

- 4 A "best practice" library of over 360 pre-built metrics, Intelligent Dashboards, 200+ Reports and alerts for CFO, Finance Controller, Financial Analyst, AR/AP Managers and Executives

Speeds Time To Value and Lowers TCO

**Build from Scratch
with Traditional BI Tools**

**Oracle BI
Applications**

To be Pervasive, BI must get the full spectrum of your activity

Sales	Service & Contact Center	Marketing	Order Management & Fulfillment	Supply Chain	Financials	Human Resources
Pipeline Analysis	Churn Propensity	Campaign Scorecard	Order Linearity	Supplier Performance	A/R & A/P Analysis	Employee Productivity
Triangulated Forecasting	Customer Satisfaction	Response Rates	Orders vs. Available Inventory	Spend Analysis	GL / Balance Sheet Analysis	Compensation Analysis
Sales Team Effectiveness	Resolution Rates	Product Propensity	Cycle Time Analysis	Procurement Cycle Times	Customer & Product Profitability	HR Compliance Reporting
Up-sell / Cross-sell	Service Rep Effectiveness	Loyalty and Attrition	Backlog Analysis	Inventory Availability	P&L Analysis	Workforce Profile
Cycle Time Analysis	Service Cost Analysis	Market Basket Analysis	Fulfillment Status	Employee Expenses	Expense Management	Turnover Trends
Lead Conversion	Service Trends	Campaign ROI	Customer Receivables	BOM Analysis	Cash Flow Analysis	Return on Human Capital

Prebuilt adapters:

ORACLE

PeopleSoft.

What Customers Are Achieving

With Oracle BI Applications

Honeywell

Deployed to 800 users in under 90 days
Analytics for sales-oriented contact center

Baxter
BioScience

Live in 120 days
Sales Analytics

verizonbusiness

Deployed to 3,000+ users in 3 months
Sales Analytics

Pfizer

4 months from decision to live for 1,200 users
Pharma Analytics

Microsoft

Live in 100 days, 6,500 users
Sales and Marketing Analytics

“I can vouch that it can be deployed as rapidly as they claim...It is a product that really delivers.”

Most **Complete** Suite of Financial Performance Management Applications

The Management Cycle and EPM

- Link strategic goals to operational decisions
- Transform financial management processes
- Monitor execution in real-time
- Deliver consistent, reliable insights to drive action
- Lower costs and reduce system complexity
- Single version of the truth

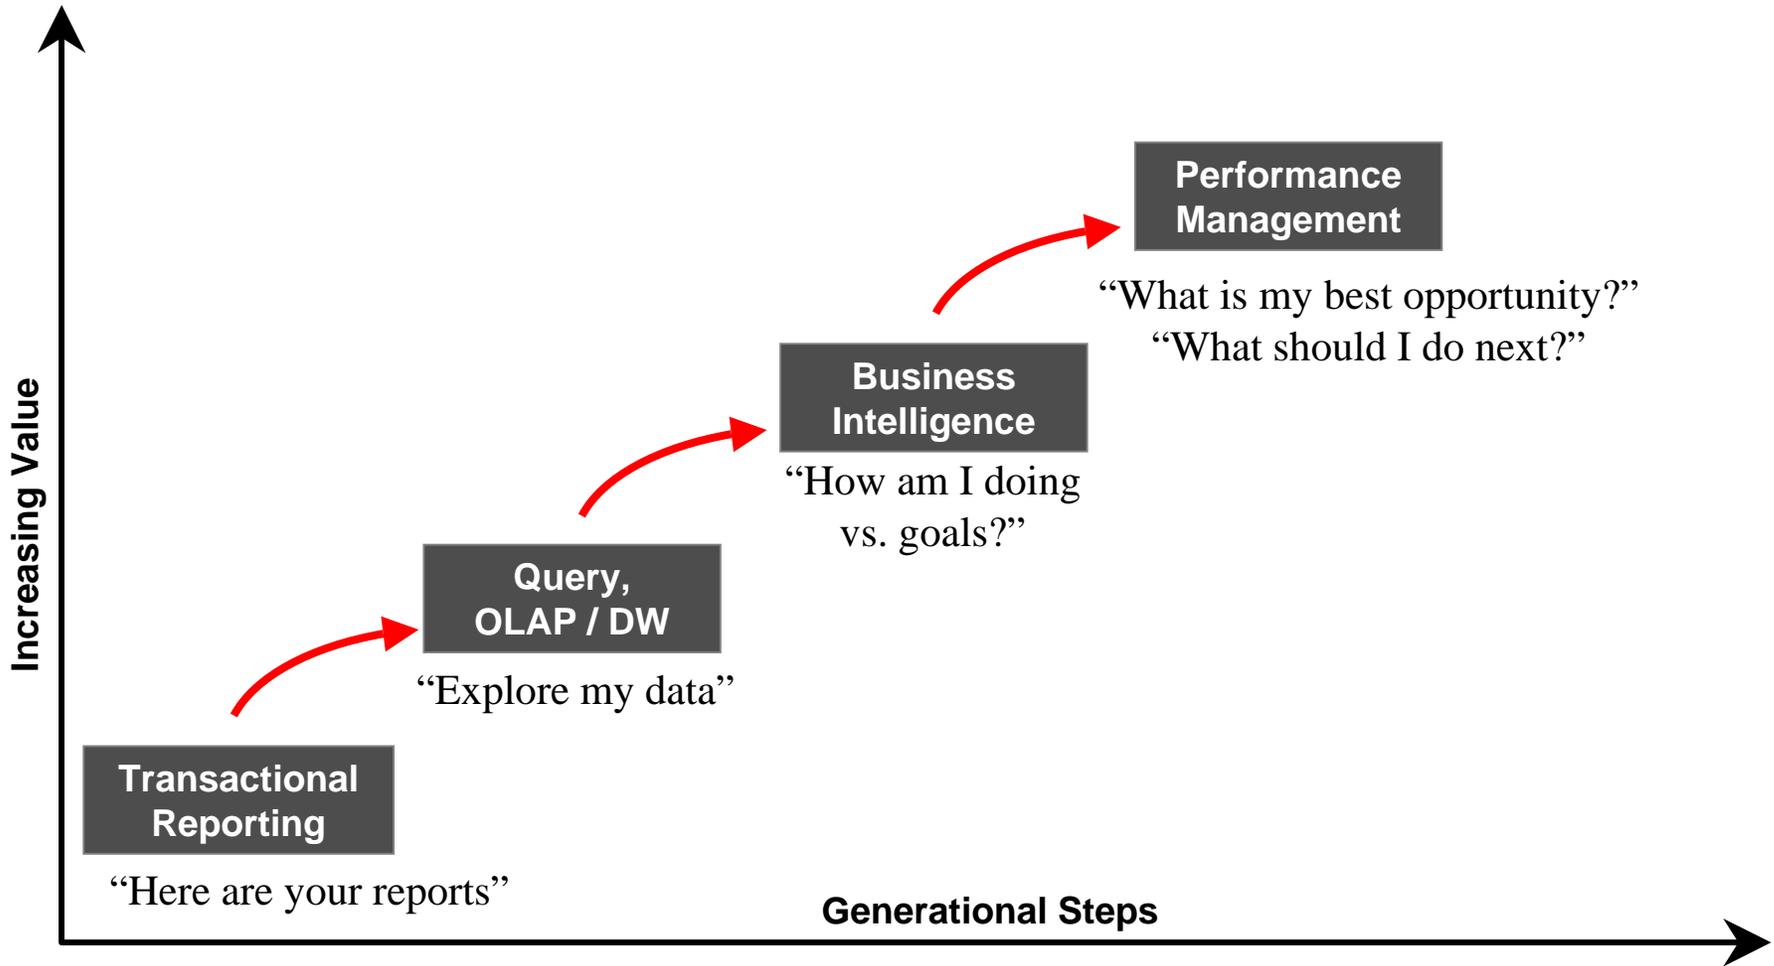

Leadership Product Strategy

Integrating Enterprise Performance Management and BI

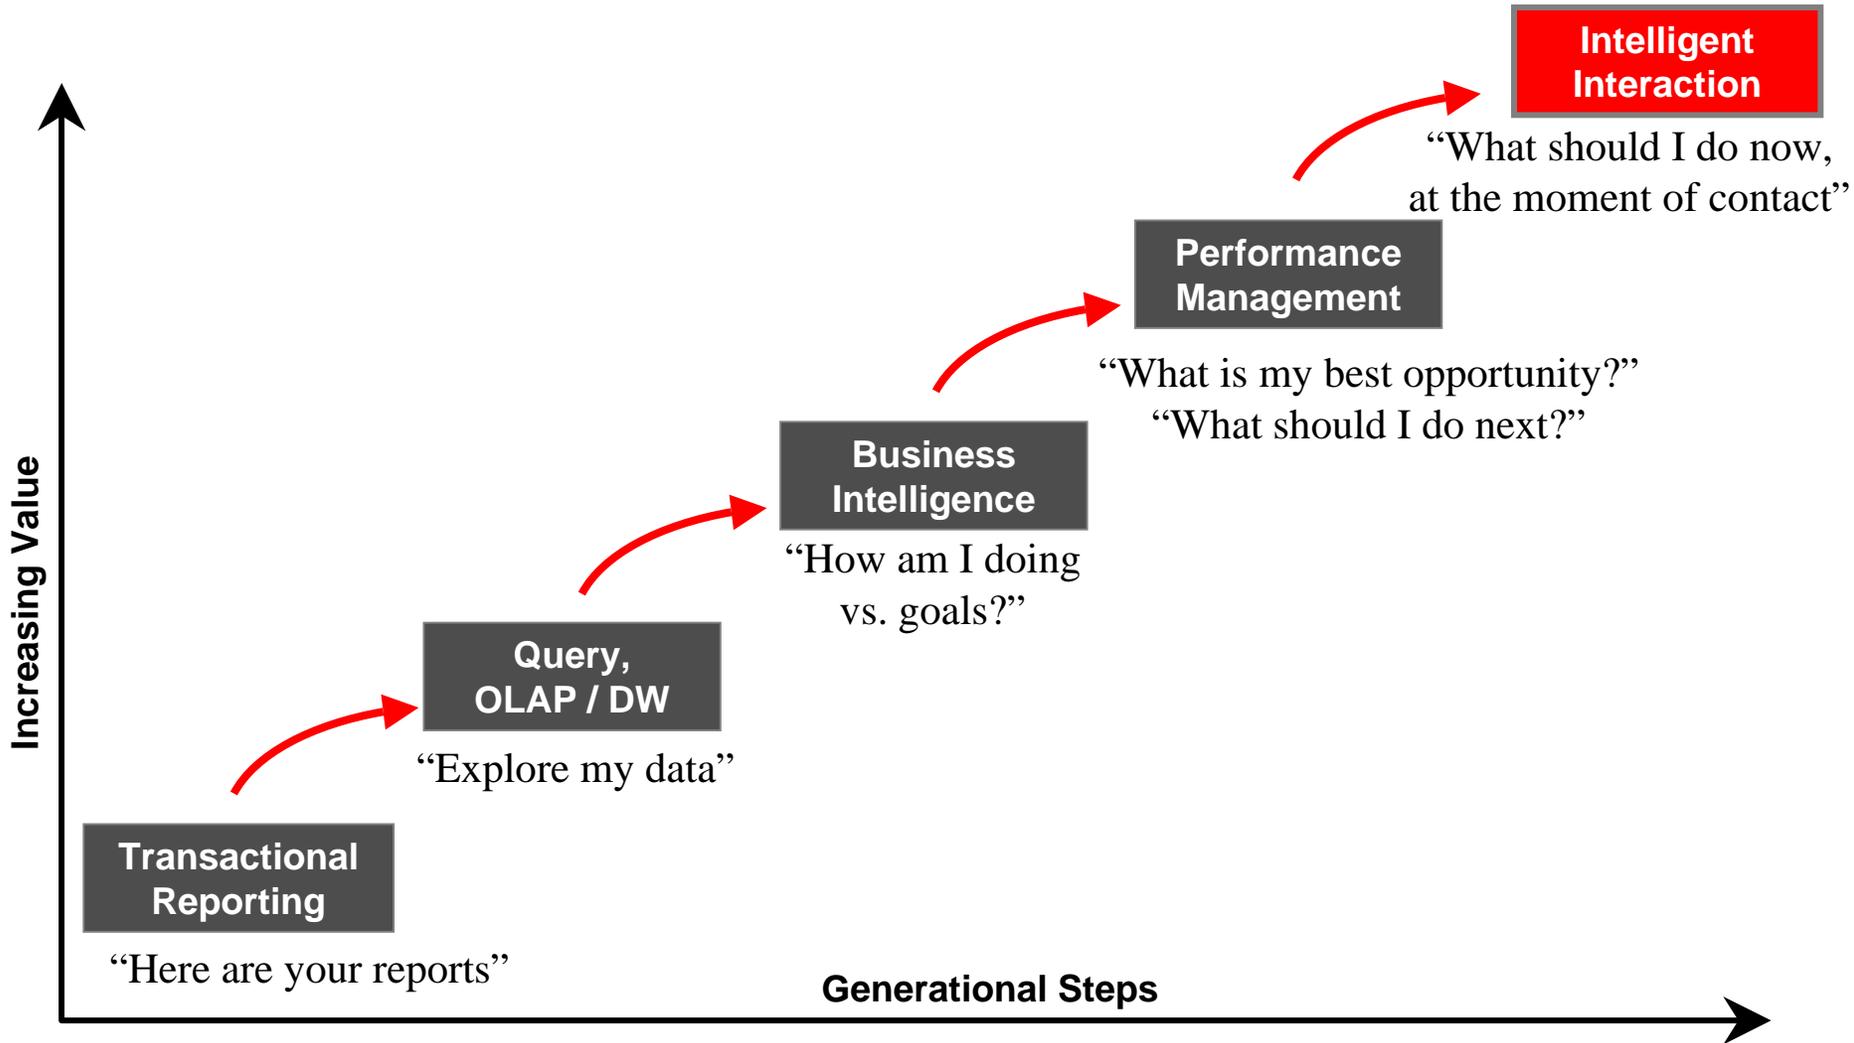

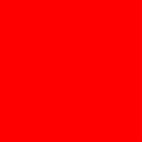

- **Provides industry's first EPM System**
 - Align operational intelligence with strategy: better insight
 - Align operational decisions with strategy: better decisions
 - From insight to action: drives better results more quickly
- **Built on integrated and modern BI Foundation**
 - Most complete and integrated BI tools and BI applications
 - With a unified and consistent view of business performance
 - For Oracle and non-Oracle systems
- **Improves customer choice for BI solutions**
 - First integrated, EPM System to combine Financial Performance Management and Operational BI Applications
 - Most complete, best-of-breed tools and analytic applications

From History to Present

From History to Present to Future

RReal **T**Time **D**Decisions

Gap Between BI and Operational Apps

- Huge investment into operational systems to make them more efficient
- Big efforts to utilize the vast amount of data using DHW, BI, Data Mining

Operational Applications

- predictive analysis
- learning process
- just-in-time interaction

BI & Analytics Solutions

Oracle RTD Bridges the Gap

- Bridge between operational and analytical worlds
- Operationalizes offline analytic insight, models and scores
- Creates new behavioral & contextual insights through continuous learning
- Unites channel experiences through singular decision framework
- Drives process behavior of both technology and human resources

Summary

- **BI** is more than simple standalone reporting
- It must be **pervasive** and **hot-plugable**
 - Access to all sources
 - across all LOB
 - through any delivery channel
- BI should be an integrated part and embedded part of **EPM**
- To link **Insight** and **Action**
- At the moment of interaction using **RTD**
